

CTF Proposal

Yehuda Gurovich - 44184491. August 4, 2024

- 1. Python development:** Start with an image with a clue that needs to be loaded using pickle.
- 2. HTTP server and Registered Domain:** The code will result in the name of a website on a registered domain.
- 3. Wireshark:** The website will have a .pcap file to be analyzed using Wireshark.
- 4. Encryption:** The information found in the capture will be encrypted with an encryption algorithm.
- 5+ Others:** The Wireshark packets will be created using some protocol and/or scapy and/or Sockets.

After decrypting the message you finish the CTF.
